Haven Healthcare of Seacoast Welcomes New Technology

The residents of Haven Healthcare of Seacoast, a skilled nursing and rehabilitative care facility, recently have received a generous donation from Monarch Technology Solutions, LLC. Haven Healthcare facility in Hampton is some sixty years old and it's long been a community fixture. Today it provides 24-hour skilled nursing care, wound and pain management, as well as physical, occupational, recreational, and speech therapy. The plus 100-bed facility houses an eclectic population ranging from baby boomers to centenarians, and the need for modern technology is great.

It has been Haven's hope to connect its residents to modern technology by providing them with computer skills and the use of e-mail. In this way they can share letters, pictures, and other information with their families around the world. Monarch Technologies has made this possible. Some of the residents have families in England, as well as throughout the United States. Moreover a number of the residents have used computers in the past to communicate with family and friends as well as in business activities. These folks have now gained that opportunity thanks to Jim Wynkoop of Monarch Technology Solutions.

Since beginning Monarch Technology Solutions in Bedford, NH in 2003 Wynkoop has seen a continuing growth in business. Monarch Technology is currently located on Priscilla Lane in Auburn, NH. Wynkoop believes in giving back to the community. To that end Jim has provided the surrounding community with numerous donations and services.

The residents at Haven are overjoyed at this expansion. Already they are using the computer not only for communication but also genealogical and biographical purposes. Residents with previous computer training have volunteered to assist in developing the other resident's computer skills. All of the residents extend their thanks to Jim and the folks at Monarch Technologies for opening up the communication lines to their families through modern technology.
